## DETAILED ACTION

### *Election/Restrictions*

1. Claims 14-18 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected group, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on November 16, 2006.

### *Claim Rejections - 35 USC § 102/103*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1, 2 and 4-12 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over U.S. 5,314,721 (Muller et al) as per reasons of record.

### *Claim Rejections - 35 USC § 103*

5. Claims 3 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. 5,314,721 (Muller et al) described hereinabove as per reasons of record.

According to applicants, Muller et al are silent as to the formation of hydrophobic side-chains on the polymer. It is maintained that the hydrophobizing step of the reference using long

Art Unit: 1711

chain monocarboxylic acids as the hydrophobic compound would give rise to hydrophobic side chains. In this regard it is noted that applicants' specification discloses carboxylic acids as suitable hydrophobic compounds, thus embracing the long-chain monocarboxylic acids disclosed by the reference (page 5). In fact, applicants claim hydrophobic compounds having up to 40 carbon atoms (e.g., claim 4). Furthermore, the molar ratio of nitrogen-containing polymer to hydrophobic compound used by applicants can range from 1:1 to 99:1 (page 5), which is not unlike that used by the reference. Accordingly, since Muller et al use the same reactants in the same amounts and under similar reaction conditions as applicants, there is reasonable basis for believing that their product is the same as applicants. The examples provide various formulations meeting the requirements of the present claims in terms of the types of materials added and method of preparation. The onus is shifted to applicants to establish that the subject matter of the present claims is not the same as or obvious from that set forth by the reference.

### ***Conclusion***

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
